Hi Y'all,

 I've searched the FAQ and several IDL tips files, but I haven't seen an
answer to this stupid question. Is there a way to change the colors of
the text in the source code and output windows? That white background
on my monitor is making my eyes go crazy. Can't find the option in the
IDL preferences menu, but I'm assuming there must be some way to change
these colors.
 Thanks everybody.
