Hi,

I use a .pro file in my Visual Basic project. The fonction read a header in a image file.

The .pro file use the fonction byteorder:

```
readu, unit, h1  
byteorder, h1, /ntohl
```

My question is wath is the utility of the byteordre? Does it reverse the byte in the array?

I need to know that because I want to transfert the IDL procedure in Visual Basic code but I don't know how to translate this fonction (byteorder).

Thanks for your help,

Skiso
