Hello all,

I'm trying to learn to use LIVE_PLOT in IDL5.1 and can't figure out how to
specify the
label for the y-axis (YTITLE in the old PLOT routine). I've spent a good
bit of time
reading up on LIVE_PLOT and LIVE_STYLE, but must be overlooking something.
It always comes up labelled as "Y". If I click on it, I get a properties
sheet with
an entry for title and I can change it there, but I don't see how to get it
specified
programatically on creation.

Is there a way to do it?

Thanks,
  Craig Hamilton
