You might find my GRAYSCALE.PRO routine useful; it creates a widget
that allows you to adjust the grayscale interactively. This is part
of a larger set of routines available at:

 ftp://bial8.ucsd.edu   pub/software/idl/share/idl_share.tar.gz

There is a README file describing each routine available. Each
routine has a .doc documentation file, and you can view all of these
(once files have been extracted) using my LHELP.PRO program.
