Hi All (and David Fanning in particular), Sorry Dave, I just happened to have a problem with your PROCESS.PRO procedure. :o I used it quickly (on my SGI) to produce a *.gif of an image. When I did a view of the *.gif file (using xv) , however, I got a black box where the drop down menu is located. I've never made a gif file with IDL yet but this is really strange. Does anyone else have this experience or is it just another SGI problem?...sigh.

Rose Dlhop...
