
Subject: 2D UNIQ function?

I'm looking for a UNIQ function that finds unique elements in a two-dimensional array. Something like

```
a=[[1,2],[1,2],[2,3],[3,4],[3,4]]  
result=UNIQ2D(a)  
print,result  
[1,2], [2,3], [3,4]
```

Did anybody already solve that problem?
