I am the beginner of PV-Wave. Now I have a problem to ask for help.

I am writing a PV-Wave program to get a data from a data file.

The data file was generated by FORtran program where the data was stored in a fixed format.

```
OPEN (unit=3,FiLE='z.out')
write (3,20) TT
TT=3.5
  20 format(' TT=',f5.2)
close (unit=3)
```

my PV-Wave program is:

```
openr, 1, 'z.out'
readf, 1, TT, format="(' TT=',f5.2)"
close, 1
```

The PV-Program does not work. The error message is :

% Unable to apply format code F to input: " TT= ".

% Execution halted at \$MAIN\$ (READF).

If someone know the problem, please e-mail to me on my chester account.

Thanks. Jianhua
