
Subject: interactively moving images around a page.

I don't know if anyone has ever tried to do this with IDL, but I'm trying to find a way to interactively move 3-D scaled images around a page that could potentially hold multiple images. These images are surface plots and/or contours. What I've been messing around with so far, is trying to use the POSITION key word along with slider widgets to move the surface plots around. For 2-D images this would probably work fine since you only need to worry about 2 plot directions and 2 position directions. But for 3-D stuff this becomes more difficult. I have yet to come up with a satisfactory solution.

If anyone has tried this or can think of a way to do it, please send me email with your suggestions.

Thanks

John
