Gentles,
 I hope there is someone reading this group who can help me. I
am trying to generate a single graph which has several sets of data
that all share the same absyssa range. In order to present them most
clearly, I have offset them by 0.33 normalized units, however to
present them most completely I would like to show the 0.1 scale on
the first set. Is there any way I can set YMINOR as 10 from 0-1 and
as 3 from 1-5? [or an equivalent set of AXIS commands?]
   Thanks in Advance,
   Jim Boyd
