Hi All, Just thought I would add a note on XCD which I had found on David Fanning's page . I use it regularly and have found interesting "quirks" that may not necessarily be bugs. One, the response needs only one click. This is especially important if you are going up a directory with .. where a double click usually takes me out of my home directory and into other areas with loooooong directory lists which take forever to load. Another problem (which is really my problem, I think) is that it doesn't seem to work when another program crashes ,(not all, just some of the them.) It's a really great program. :)

p.s. I work with IDL 5.0 and SGI Unix.

Rose
