Subject: Window Bug using Widgets

I'm running IDL version 2.3.2 under OPEN LOOK. I've run into a bug, which can
be distilled to the following example:

```
PRO Xbug_ev, event
   PRINT, "Going Into Window"
   WINDOW, 0, xs = 1000, ys = 800
   PRINT, "Leaving Window"
END

PRO Xbug
   Xbugbase = Widget_Base(TITLE = "Xbug")
   Xmenu, ["Press Me"], Xbugbase
   Widget_Control, Xbugbase, /REALIZE
   XManager, "Xbug", Xbugbase, EVENT_HANDLER = "Xbug_ev"
END
```

When run and "Press Me" is clicked, the progam hangs in the WINDOW statement.
"Going Into Window" is printed, but "Leaving Window" never is and idl needs to
be killed.

Is this a commonly known bug? Is there any work around? Or am I doing something
wrong?

Thanks,
Mike Smyth
