Doug Larson (djl@REMOVECAPSloki.srl.caltech.edu) writes:

> Well, I did what David told me, and of course it works :)

I've been working on a hoary satellite data problem this morning (Talk about working for cheap, this is the LAST time I bid a job on a project basis. Who writes this satellite packing documentation anyway? They are not going to lose their jobs, that's for sure. They are the only people on God's green earth who can understand that overly thick pile of nonsense!)...where was I?

Oh, yes. I've been working on a hoary satellite data problem this morning and I decided a bike ride in the crisp, Colorado air was exactly what the doctor ordered. I hadn't gone a block before I realized I had probably just screwed Doug up for good with my last answer. :-(

I can't really make out *what* he is trying to do with this program, but it's possible he wants to pass the pickedPtr back to the calling program. In that case, he definitely does NOT want to destroy the pointer in the CLEANUP routine. If fact, if that is what he wants to do, the program should be working now, as far as I can see.

Cheers,

David
