Subject: IDL or OpenLook "feature"?

I just lost my IDL session for the nth time. Sometimes when I use a widget application, IDL crashes with a bus error, segmentation fault, or other error. This time, I got an error from Open Look:

```
IDL> xloadct
```

```
% Compiled module: XLOADCT.
```

```
% Compiled module: XREGISTERED.
```

```
OPEN LOOK Toolkit Error in application "idl": Can't allocate gray pixel
```

Is OpenLook forcing IDL to exit? Or is IDL responding poorly to life's vicissitudes? Has anybody else had widget problems?
