
Subject: Polyfill with pattern?

Hello again all:

I'm currently having a problem with polyfill using the pattern keyword. In the example code below, which was taken from the IDL help example for polyfill, a white screen using device coordinates. The result *should* have created a grid of dots on the window:

```
xsize = 512
ysize = 512
window, 0, xsize=xsize, ysize=ysize
```

```
PAT = BYTARR(10,10) ;Define pattern array as 10 by 10.
```

```
PAT(5,5) = 255 ;Set center pixel to bright.
```

```
POLYFILL, !X.WINDOW([0,1,1,0]), $
```

```
!Y.WINDOW([0,0,1,1]), $
```

```
/NORM, PAT = PAT ;Fill the rectangle defined by the four corners of  
the window with the pattern.
```

```
window, 1, xsize=xsize, ysize=ysize POLYFILL, [0,xsize-1,xsize-1,0], $  
[0,0,ysize-1,ysize-1], $ /DEVICE, PAT=PATI get just a blank screen with the  
example as is, and
```

Why does this not work for me?

```
