Subject: what am I doing wrong?

I have a script that does...

```
> anydata, subtemp, 45.0, 40.0, -71.5, -65.0, inbounds
>
> print, subtemp
> print, inbounds
>
> if (inbounds eq 1) then begin
>   openw, tarunit, 'tarfile.include', /GET_LUN
>   printf, tarunit, l1a
>   printf, tarunit, ozonefile
>   printf, tarunit, metFile1
>   printf, tarunit, metFile2
>   printf, tarunit, 'SEAWIFS_SENSOR_CAL.TBL'
>   close, tarunit
> endif
```

When I run it, I get

```
> S1998228192646.SST
>      0
```

and tarfile.include is created, which since inbounds is 0, shouldn't
happen... can anyone explain why it's not working or some additional
diagnostics that might point to the cause?

TIA,
Bruce
