## Subject: using tvscl??

Posted by akk on Sat, 10 Oct 1998 07:00:00 GMT

Hi

I'm using tvscl to view images (i.e. fits files) in IDL.  Usually the
image is displayed as white on black (background).

I'd like to switch this so that the imnage is displayed as black on white.
I thought the command:
 tvscl, -1

would make this change however I think I was wrong, and I  couldnt find
the correct command in the idl refernce manual to switch to a
black on white  display.

Could someone tell me what the correct command is?

Thanks
Anil

P.S. Please reply to my email address.
