You can check out my function sym.pro (attached below).

Usage: plot,x,y,psym=sym(N)

Martin.

;-----  
;+  
; NAME:  
; SYM  
;  
;  
; PURPOSE:  
; define a standard sequence of plotting symbols  
;  
;  
; CATEGORY:  
; utility  
;  
;  
; CALLING SEQUENCE:  
; SYM, NUMBER  
;  
;  
; INPUTS:  
; NUMBER -> symbol number  
;  
;  
; 0 : dot

```
; 1 : filled circle
; 2 : filled upward triangle
; 3 : filled downward triangle
; 4 : filled diamond
; 5 : filled square
; 6 : open circle
; 7 : open upward triangle
; 8 : open downward triangle
; 9 : open diamond
; 10 : open square
; 11 : plus
; 12 : X
; 13 : star
; 14 : filled rightfacing triangle
; 15 : filled leftfacing triangle
; 16 : open rightfacing triangle
; 17 : open leftfacing triangle

; KEYWORD PARAMETERS:
;
; OUTPUTS:
;   function returns the symbol number to be used with PSYM= in the
;     PLOT command
;
; SUBROUTINES:
;
; REQUIREMENTS:
;
; NOTES:
;   This function produces a side effect in that the USERSYM procedure
;   is used to create a symbol definition. It's meant for usage within
;   the PLOT, OPLOT, etc. command
;
; EXAMPLE:
;   PLOT,X,Y,PSYM=SYM(0),SYMSIZE=3
;     produces a plot with dots (standard symbol 3)
;   FOR I=0,17 DO OPLOT,X+I,Y,PSYM=SYM(I),COLOR=I
;     overplots 17 curves each with its own symbol
;
; MODIFICATION HISTORY:
;   mgs, 22 Aug 1997: VERSION 1.00
;
