i am doing a tv command and then a plot command to create axes around the image. i would like to use the plot command and exactly specify the x axis tick names that i want. here is my array of xaxis names in this order:

```
xaxis=[0,2,4,6,20,33,40,6,9,15,25,35]
```

```
xaxis=string(xaxis)
```

but i am unsure which keywords to use.

(in my case my xaxis array will be much longer, but i don't even know how to do this example case.)
