
Subject: Superscripts in IDL [x-y]title

Hello,

Just did (tried to do) a search on dejaneux to see if I could find this there and got not hits. So here goes.

My co-author on a paper would like to see superscripts in the axis titles of simple 2-d plots, e.g. instead of something like cm^{*-3} ot have cm^{-3} - using TeX notation.

I am using PS fonts so I think there must be a way to do this. Is there any way to get IDL to do it directly? I suppose I could do it in POSTSCRIPT but I don't really know PS and don't have time to learn it right now. At least I think I don't - perhaps the same thing? <G>

Any suggestions? TIA

Regards,

Henry Smith
