Hi there>

Im having some problems with the compiling, linking and setup of a C procedure to be used in IDL running in a VMS.

-In my IDL User guide manual says that once you compiled your programm you should link it with the following statement

MY_PRG : My programm

\$LINK MY_PRG, SYS\$INPUT/OPT/SHARE

well it hangs up, waiting for something.

-The second question is, can I have more than a function in my file, how things change then.

-Finally, how is the parameter passing for a C function.

Thanks in advance
Estevez
