Subject: IDLgrColorbar object

I am attempting to use the Colorbar object in IDL 5.1 as a legend for a
color-filled contour OOG plot. I am confused by the interactions of the
COORD_CONV, DIMENSIONS, TICKVALUES, TICKTEXT, and MAJOR keywords with
respect to positioning and labeling the colorbar. More specifically,
COORD_CONV and DIMENSIONS seem to be related to data/normal coordinate
conversion, while TICKVALUES seems to work with palette indices. Can anyone
provide for me a clearer succinct explanation than appears in the IDL
documentation?

Thanks for anyone's effort,
Peter Connell
