Hi Everybody,

I just tried to port my IDL routines that include IDL's built in CDF routines from UNIX to the PC. This is the first time a port didn't work right away for me. This is what happened:

I am using the CDF_VARGET routine to read data from a CDF file into a variable. The whole file is only 150KB small and I tried to read the 'Epoch' variable. The error I get is: IBM_PC_OVERFLOW: Greater than 64Kb of memory required.

Does that mean I can't read any CDF file variable that is greater than 64KB??? Why use CDF then???????

Maybe since I don't see the solution right now you know better than I do....

Thanks for helping....

Haje
