Late yesterday RSI sent out an e-mail about the HASP/NT4/SP4 situation/remedy which is related to which HASP version you are running. I got back an answer from AKS (Aladdin Knowledge Systems) to the question: "How does one determine the HASP-driver version number that is in effect?". Their answer: run hinstall /info from the command line. In my case hinstall.exe is in the path ...\\rsi\\idl52 .
