
Subject: Problems with IDL 5.2

Hi,

I received the new version a couple of days ago (Mac OS). So far the only thing that I have noticed is that it seems slower. I have the following questions and I hope that some one out there has solutions:

1. How can I get rid of the Password requirement when IDL launches? To be honest, it is rather annoying.
2. Echoing in the output log window is very slow. Is there any way to speed it up? I have turned syntax color off.
3. Variable Watch window does not work with array structures. It only shows the first element and would not index up. It works with normal arrays even if they are within a structure. Any way to fix this? Does this happen on other platforms?

Thanks in advance for any suggestions. Cheers,

- Saeid
