Research Systems is pleased to announce that ENVI 3.1 is shipping to all customers under maintenance. You can also download it from our web site at: <http://www.rsinc.com>

In this release, we have focused on user-requested features and enhancements to the graphical user interface. Some of these enhancements include: improved image display control, improved handling of the n-Dimensional visualizer and a new color table editor. Plus, we've added support for SeaWiFS data, European Space Agency (ESA) versions of Landsat TM and AVHRR data, and support for Microstation and MapInfo vector formats.

Please see the RSI web site (www.rsinc.com) or your "What's New in ENVI 3.1" for more details.
