Subject: !P.Background: Colours impossible?
Posted by hvdosten on Mon, 14 Dec 1998 08:00:00 GMT

Hi all,

isn't it possible to create coloured backgrounds (need it for publications)
like

!P.BACKGROUND=[r,g,b]   ?

The online-manual referres only for =0B and =255B. Trying =[r,g,b] leads to an
error on the next line:

%Expression must be a scalar in this context: <LONG Array[3]>

where it seems that it is not important what statement is in that next line
(so, !P.CHARSIZE=2.0 gets the same error-message like WINDOW)

Thanks a lot for your help

Harald (still a IDL-greenhorn...)
