I did but (I hope I did nothing wrong) I end up with a polar plot in a
cartesian system (x and y axis), which is not what I expected.
I was thinking of circles on which I can annotate the radius-value
and I like to annotate the theta (angle) value around the outer circle.
and the Intensity is either a color (for contour plot).
or in 3D the z value (cylindrical coordinate system) ...

Thanks

Mirko
