Hello,

How do I re-initialize all program variables with a procedure call?

Example, I want to do something like:

```
pro doit_toit, inlist
  openr, ilun, inlist, /GET_LUN
  filename = "
  while not eof(ilun) do begin
    readf, ilun, filename
    .rnew buildref.pro
    buildref,filename
  endwhile
  free_lun, ilun
end
```

Of course, I can't do ".rnew buildref.pro" inside program mode.

Suggestions?
