:

No, it won't. The story I got from RSI was that with the changes to make everything 64-bit compatible, and do things like support really large files, they had to go with 2.6. I posted a note a few weeks ago about it. BTW, the Linux version requires the new glibc too. I don't know what the reason for that is (except something like they only have one Linux machine and it's running RedHat).
