I don't know why RSI should be any different than any other software vendor I know. Take Framemaker, Quicken, Microsoft Word, Photoshop, or any other piece of software on this machine. Got to have that last piece of OS software to keep current.

How could it be otherwise!?

It's even worse when you upgrade your operating system. (Mac OS 8.5 is my latest nightmare.) Then you have to upgrade all your software whether you want to or not. :-(

Cheers,

David
