Subject: "clamping" an array to a maximum value?

It's late here in Oz and my brain refuses to find an
easy solution to the following seemingly trivial
problem:

I have a 2d array of floats. All elements having
a value greater than max_val I want to set equal
to max_val. My solution is a rather complicated-
looking use of the "where" function.

Thanks for any help you can provide.

Darran.
