
Subject: Keeping rotated plots the same size

Hellu,

I am using the plot_3dbox command to draw a cylinder:

```
plot_3dbox, image_x,image_y,image_z,/t3d,psym=7,ax = info.ax,az = info.az  
and then I am using widget_sliders to get new values for ax and az.
```

What happens when I rotate the cylinder around is that at certain values of ax and az the graph is larger than other graphs with different ax and az values. Is there a way that I can force the graph to be drawn the same size every time?

Thank You,

David
