Hi...

I am using the SLICER3 procedure to view 3-D data and have a couple of questions. I would also like to display a map along the bottom surface of the data cube (somewhat analogous to the way that SHOW3 puts an image on the bottom of the plot). Before I start hacking into the source code, does anyone know if there is an "modified" version of SLICER3 that does this already?

Thanx,

Bob Yantosca
