Subject: Layered draw widget?

---

Is there a way using draw widgets and direct graphics (in IDL 5.1) to have multiple images or plots "stacked" on each other in the same area? The idea is to then allow the user to scroll through each created plot or image without recreating them each time they are displayed. Sorry if this is a basic question, but I'm new to draw widgets and I couldn't find any examples of this idea.

Thanks in advance for any help!
