Dave,

I just cancelled a previous post where I had written:

```
> Dave,
>
> Shimizu said he didn't want to use the [xyz]tickNAME keyword,
> he didn't say anything about the [xyz]tickFORMAT keyword.
[...]
```

```
> Sure, dinner sounds good, since you decided to take up the
```

```
> bet :-)
```

Now that I've re-read the original question, I see that Shimizu did mention ytickformat:

```
> ...I don't like to use following style.
>> plot, [0, 1e4], ytickformat = '(e7.1)'
```

However, I think what he meant was he didn't like the look of using ytickformat='(e7.1)', not that he wouldn't use ytickformat at all.... how about a draw?

Regards,

Stein Vidar
