
Subject: XMANAGER with not top level base?

Is it possible to a base widget that isn't a top level base to call the XMANAGER procedure?

The OnLine help states:
"Arguments

Name
(...)
ID

The widget ID of the new widget's top-level base."

Another question: if I use a base (that isn't top level) as a group leader to a widget top level, will it work?

Thanks, Luis
