Subject: Concurrent CORBA calls
Posted by yung on Tue, 26 Jan 1999 08:00:00 GMT

Hi,

I have some problem for concurrent CORBA calls, and the symptom is that
CORBA calls seem getting lost, despite the appearance of successful call
completion.

As described below, <---> denotes CORBA interface, and the concurrent
corba calls
were generated by IPGateway, however, when they finally get back to
IPGateway, some of the calls got lost.

IPGateway <---> EndPtMgr <---> StateMachine <---> IPGateway
(multithread)   (multithread)   (multithread)
(multithread)

Thanks,

 - Yung
