I've just purchased ENVI (hurrah!) and immediately have a problem with it (boo!).

Someone has just sent me some DTED data which I'm not familiar with. When I point to the file (I'm not sure which one - the big one I assume) and inport, ENVI tells me it's in the wrong format. The thing is, the data's there cos I can read it using IDL (through guesswork relating to header size etc.).

So, what's up? Can anybody help me with this one or have I been sent some rubbish?

Cheers

Andy Sowter
