Subject: Weighted cross correlation routine?
Posted by Eric Williams on Fri, 05 Feb 1999 08:00:00 GMT

Does anyone have a suggestion for a cross correlation routine that would
allow you to weight each array element. Does this already exist in IDL
(I've read the help pages on the correlation procedures but didn't see
that one actually did this)? Does someone have a routine like this?
Will I need to write one myself?

Thanks for any info..

Eric
