Actually, my last response was incorrect.

A better way, using pointers is as follows:

```
!-- to delete a variable var
```

```
!-- allocate a pointer
```

```
*p=ptr_new(/all)
```

```
!-- copy the variable into pointer
```

```
*p=temporary(var)  ;-- temporary will remove var
```

```
!-- free the pointer
```

```
ptr_free,p
```

You can easily package the above into a simple procedure that deletes any variable var.

Dominic
