
Subject: Can I make entries in CW_PDMENU insensitive?

Dear all,

I am using IDL 5.2 on solaris 2.6. I want to use the CW_PDMENU routine to create a pull-down menu in my widget programs. In principle, everything works well. However, I am wondering if it is possible to make some menu entries insensitive like I can do it with buttons or sliders when they should not be used. I did not find any information about my problem in the IDL documentation and would appreciate if anybody could give me a hint.

Thanks in advance,

Steffen
