
Subject: PV-WAVE and possibly IDL color maps

I'm using PV-WAVE version v6.21a on a DEC alpha running DEC UNIX.

I was wondering if someone has a color map that has 10 different colours in it. I want to plot 2d data from 9 different classes. I want to plot to screen and printer, so I can use white on the screen and black on printer for one of the classes and the axes, labels etc.

I also put IDL in the subject line just in case PV-WAVE and IDL are still similar enough in this area.

John Black.
