Hi Folks,

Because you asked for it...

I put a new version of TVImage up on my web page today.
It now honors the !P.Multi system variable if the MULTI
keyword is set.

```
  image = Dist(300)
  !P.Multi=[0, 3, 2]
  TVImage, image, /Multi
  TVImage, image, /Multi, /Keep_Aspect
  TVImage, image, /Multi, Margin=0.02
  etc....
```

Even I was shocked at how easy it was! And it is not
even written as an object. :-(

You can download the program here:

  http://www.dfanning.com/programs/tvimage.pro

Cheers,

David

P.S. I'm doing some work on the page today. One of the
things I have decided to do is reduce the price on the
updated-for-IDL-5.2 book a bit. You can thank Ronn
Kling for the competitive book pricing environment. :-)
