Hi,

I have a problem with Insight. When I try to load a 3D array into insight using Import File the program uses vast amounts of memory and swap space slowing the program until it grinds to a halt.

The files are quite large (256x256x128 integer arrays), however, I have no problems working with this data in my own programs.

Why is insight so memory intensive, and is there a way to combat this?

Thanks for your help

Dave Brennan
