Hello,

```
<p>I am trying to do a polar stereographic plot overlaid with shaded (filled)  
continents. I can do this type of plot for an entire hemisphere (i.e. in  
the Northern Hemisphere, from the equator to the North Pole). When I try  
to "zoom" in and set the latitudinal range to be in between 20N and the  
North Pole, I get some portions of the continents extending BEYOND 20N.  
Is there a way around this?
```

```
<p>Thanks,
```
