Hello.

I am trying to do a polar stereographic plot overlaid with shaded (filled) continents. I can do this type of plot for an entire hemisphere (i.e. in the Northern Hemisphere, from the equator to the North Pole). When I try to "zoom" in and set the latitudinal range to be in between 20N and the North Pole, I get some portions of the continents extending BEYOND 20N. Is there a way around this?

<p>Thanks,

Var
