Hello IDL users,

I'm writing a procedure to process satellite images on a map projection.
I extract the image information from a jpeg file, and then I make some
transformations and write the result on GIF.

But I would like to run all in batch mode because this take time and
must be run every night.

The problem is: how to run IDL in batch mode and use all tv, tvlct,
map_image, and others ??

Thanks in advance for any help.

Andre
