I coded something up for this which uses the daycnv nasa astro routine.  
It's attached.

Good Luck,

JD

```
;+
; NAME: st2date
;
; PURPOSE: Convert systime(1) type elapsed seconds to calendar dates.
;
; CALLING SEQUENCE: st2date, st, yr,mn,day,hr,min,sec,WDAY=wday,MON=mon,
;    FORM=form
;
; INPUTS:
; st: The double number of seconds since Jan 1,1970 (as returned
;    by systime(1)).
;
; OPTIONAL OUTPUTS: (all outputs optional)
; yr: The year
; mn: The month
; day: The day of the month
; hr: The hour of the day
; min: The minute
; sec: The second, including fractional part.
; KEYWORDS:
; WDAY=wday: The day of the week, abbreviated as a string of length 3
; MON=mon: The month, abbreviated as a string of length 3
; FORM=form: The entire date formatted as in systime(0)
```

```

;
; MODIFICATION HISTORY:
; 9/19/98: Written, JDS
;
; PROCEDURES: DAYCNV (from the NASA Astro package.)
;
; NOTES: The date returned by systime(1) may or may not be in UT,
; depending on the operating system.
;-

pro st2date, st,yr,mn,day,hr,min,sec,WDAY=wday,MON=mon,FORM=form
