
Subject: Colour maps overlaid on grey-scale (medical) images

Hi,

I would like to know how to display colour overlays on medical images. For example, an overlay of bloodflow rate superimposed (in hot body colour scale) on grey-scale images of the brain. At the moment, I am not able to do this without obliterating the information in the original image. Is it possible to overlay a colour map onto a grey-scale image without obliterating information in the grey-scale image ? ie: by making the colour overlay "transparent" to some degree ?

Jason
