Hi Philip,

Is the above exactly what you have written? If so, there is a mixup in the type of block. The IF should be a FOR, for a loop. If you are writing an IF block, then the Do should be a THEN and the ENDFOR should be an ENDIF, and there should be some conditional statement, not I=0,N. I use IDL but am pretty sure that the formats of the blocks are the same.

Rose
